

Amendments to the claims (this listing replaces all prior versions):

1. (Currently Amended) A method comprising
receiving, at a mobile communication device ~~handwritten-information-server~~, data
representing handwriting motion captured electronically on a handwriting-capturing device
separate from the mobile communication device ~~based on handwriting by a remote user of the~~
~~device, in which the data represent the handwriting motion and are communicated to the server~~
~~through a communication device separate from the handwriting-capturing device without the~~
~~user operating the communication device, and~~
processing the handwriting data in accordance with instructions provided ~~to the server~~
through a user interface of the mobile communication device.
2. (Currently Amended) The method of claim 1 in which the handwriting data is generated
using by the handwriting-capturing device ~~at the location of the remote user.~~
3. (Cancelled)
4. (Previously Presented) The method of claim 1 also including
performing handwriting recognition at the handwriting-capturing device.
5. (Currently Amended) The method of claim 1 also including
performing handwriting recognition at the mobile communication device ~~handwritten-~~
~~information-server.~~
6. (Currently Amended) The method of claim 1 also including
at the handwriting-capturing device ~~location of the remote user~~, forming an electronic file
representing the handwriting motion data,

transmitting the file wirelessly to the communication device, and
transmitting the file from the communication device to ~~[[the]]~~ a handwritten-information server.

7. (Original) The method of claim 1 in which the handwriting data includes information identifying a destination of the handwriting data.

8. (Original) The method of claim 1 in which the processing of the handwriting data includes forwarding it to a destination.

9. (Original) The method of claim 8 in which the forwarding comprises sending the handwriting data in FAX format.

10. (Original) The method of claim 8 in which the forwarding comprises sending the handwriting data as an email attachment or in a body of an email.

11. (Cancelled)

12. (Currently Amended) A method comprising
storing, in a server, handwriting information provided wirelessly by a handwriting-capturing device, and

communicating the handwriting information to destinations based on instructions provided by a user of the handwriting-capturing device,

in which the handwriting information comprises data representing handwriting motion of the user captured electronically by the handwriting-capturing device ~~based on handwriting by the user~~ and is communicated to the server through a mobile communications device separate from the handwriting-capturing device independent of interaction by ~~without the user operating with~~ the communication device.

13. (Currently Amended) A method comprising
~~storing in a server~~ at a mobile communication device,
receiving handwriting information ~~received~~ wirelessly from a separate handwriting-
capturing device, and
~~providing through~~ an interactive user interface on ~~[[a]] the mobile device, independent of~~
~~the handwriting capturing device to enabling~~ [[e]] a user of the handwriting-capturing device,
after the handwriting information has been received ~~stored in the server~~, to control functions
applied to the ~~stored~~ handwriting information.

14-37. (Cancelled)

38. (Currently Amended) The method of claim 13 in which ~~providing the interactive~~ enabling
the user interface includes receiving input through one or more of a screen on the mobile device,
a web browser, speech recognition, the separate handwriting-capturing device, or touch-tone
sequences.

39. (Previously Presented) The method of claim 38 in which receiving input includes
receiving additional handwriting information.

40. (Currently Amended) The method of claim 13 in which the functions ~~storing~~ include [[s]]
converting the handwriting information to a character format.

41. (Previously Presented) The method of claim 13 in which the functions include retrieving
the handwritten information.

42. (Previously Presented) The method of claim 13 in which the functions include forwarding
the handwritten information to another user.

43. (Previously Presented) The method of claim 13 in which the functions include making
the handwritten information available on the Internet.

44. (Previously Presented) The method of claim 13 in which the functions include performing computations on the handwritten information.
45. (Previously Presented) The method of claim 13 in which the functions include interpreting the handwritten information into computer-usable information.
46. (Previously Presented) The method of claim 45 in which interpreting the handwritten information includes extracting an address from the handwritten information.
47. (Previously Presented) The method of claim 45 in which interpreting the handwritten information includes extracting a phone number from the handwritten information.
48. (Previously Presented) The method of claim 45 in which interpreting the handwritten information includes extracting a task from the handwritten information.
49. (Currently Amended) A method comprising
at a first mobile device, forming an electronic file representing handwriting motion data captured electronically based on handwriting by a user of the mobile device,
transmitting the file wirelessly from the first mobile device to a second mobile communication device separate from the first mobile device ,
transmitting the file from the second mobile communication device to a handwritten-information server,
~~the transmitting to the communication device and to the server being performed without the user operating the communication device,~~
receiving the file at the handwritten-information server, and
processing the handwriting data represented by the file in accordance with instructions provided to the server by the user.

50. (Currently Amended) The method of claim 49 in which the second mobile communication device comprises a user interface and is enabled to display a graphical representation of the handwriting motion data and to edit the handwriting motion data.

51. (Currently Amended) The method of claim 1 in which the instructions are provided to the mobile communication device server in the handwriting and identified at the mobile communication device server.

52. (Previously Presented) The method of claim 1 in which the handwriting-capturing device is a pen holder used in combination with a pen.

53. (Currently Amended) The method of claim 12 in which the instructions are provided to the mobile communication device server in the handwriting and identified at the mobile communication device server.

54. (Previously Presented) The method of claim 12 in which the handwriting-capturing device is a pen holder used in combination with a pen.

55-58. (Cancelled)

59. (New) A method comprising

at a handwriting-capturing device, forming an electronic file representing handwriting motion data representing handwriting motion captured electronically on the handwriting-capturing device,

transmitting the file wirelessly to a mobile communication device separate from the handwriting-capturing device and,

on the mobile communication device, processing the handwriting data in accordance with instructions provided through a user interface of the mobile communication device, including sending the handwriting data in an email.
